The following table shows which versions of Xsan and StorNext controllers and clients can be used on the same SAN. Important: If you set up a LUN that is larger than 2 terabytes (TB), be aware that older clients (those running Xsan on Mac OS X 10.3 Panther or Xsan 1.2 or earlier on Mac OS X 10.4 Tiger) cannot read these large LUNs.

~~Xsan Administrator's Guide - Apple~~

Xsan combines RAID arrays into large, easy-to-expand volumes of storage that clients use like local disks, but which are actually shared over a high-speed Fibre Channel fabric or a Distributed LAN Client (DLC) connection. This guide describes how to set up and manage an Xsan storage area network (SAN). This guide also helps you migrate your existing Xsan 3 storage area network to the latest version, either Xsan 4 for Yosemite clients or 4.1 for El Capitan clients.

You can also try to manually configure the Xsan client: 1. Copy two Xsan configuration files from your MDC to the client: /Library/Preferences/Xsan/fsnameservers /Library/Preferences/Xsan/.auth_secret Take care to preserve the same ownership and permissions when you install the files on the client. 2. Write a simple config file on the client:
