[Inclusion Body Myositis | Myositis Support and Understanding](#)

Sporadic inclusion body myositis (sIBM) is the most commonly acquired myopathy in patients over the age of 50. More men have inclusion body myositis than women, and the disease is rarely seen in people younger than 50 years of age. Inclusion body myositis is unlike all other forms of myositis in terms of symptoms, treatment, and who it affects.

[Sporadic Inclusion Body Myositis | The Myositis Association](#)

Inclusion body myositis (IBM) is one of the most common disabling inflammatory myopathies among patients older than age 50. Based on two small studies conducted in the 1980s and 1990s, 1 to nearly 8 annual incidences of IBM are expected in every 1 million Americans. 1. Another word for
