Mechanics is the branch of physics that deals with the study of the motion of bodies subjected to forces. Mechanics is divided into statics, which deals with sets of forces in equilibrium and kinematics, which deals with dynamic forces acting on objects. In addition rotational forces and oscillatory motion are also considered.

In linear motion, it is often useful to consider the (linear) momentum of a body in rotation motion, angular momentum is important. Consider a rigid body rotating about an axis O and having angular velocity ω at some instant.
