New medical technologies are increasingly at the centre of novel transformations in the human and social body. Whilst reproduction, health, ageing and dying have long been areas for technical intervention, the emergence of molecular biology and information technology raise far-reaching political, social and subjective questions.

Introductory chapters outline the major developments since 1900. The authors then examine the technological bases of some of the most important innovations in medical technology and analyze the economic and ethical issues surrounding them. Topics include cardiovascular technology—pacemakers, defibrillators, and artificial hearts; critical care technologies—resuscitation and life-support devices; and medical imaging methods—ultrasound and computed tomography.

*New Medical Technologies and Society: Reordering Life ...*

The laws and regulations around genetic technologies will inevitably change as the technology develops further and we will need to work out as a society what we find ethically acceptable. When the Royal Society carried out a consultation exercise in 2017, there was widespread agreement about the need for effective and consistent regulation.

*New medical technologies and society: reordering life ...*

Technology and human life cannot be separated; society has a cyclical co-dependence on technology. We use technology; depend on technology in our daily life and our needs and demands for technology keep on rising. Humans use technology to travel, to communicate, to learn, to do business and to live in comfort. However, technology has also caused us concerns.
