Psychology Stress Health Study Guide Answers

A new US study now offers a plausible model of how chronic psychological stress could lead to heart damage. It involved both mice and junior doctors. Researchers checked the blood of a small group of doctors after a week at work in intensive care. After a week of this stressful work, their white blood cell count had increased.

Stress 'causes damage to the heart,' study finds - NHS

Stress responses increase strain upon circulatory system due to increased heart rate etc. Stress can also affect the immune system by raising blood pressure. Hypertension (consistently raised blood pressure over several weeks) is a major risk factor in coronary heart disease (CHD) However, CHD may be caused by eating too much salt, drinking too much coffee or alcohol.
